Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	**Stage 1**	**Stage 2**	**Stage 3**
Actions *What does the customer do?*	• Define the project objective. • Collect the flood prediction dataset from Kaggle. • Organize the project structure. • Load and explore the dataset. • Perform data preprocessing (handle missing values, treat outliers, split data, and apply feature scaling).	• Train multiple machine learning models (Decision Tree, Random Forest, KNN, and XGBoost). • Evaluate the models using accuracy and classification metrics. • Compare model performance. • Select and save the best-performing model as a Pickle (`.pkl`) file.	• •Design the web interface using HTML and CSS. • Build the Flask application. • Integrate the trained machine learning model. • Test the application with different inputs. • Deploy the application on PythonAnywhere and verify its functionality.
Touchpoint *What part of the service do they interact with?*	• Dataset collected and preprocessed successfully.	• Machine learning model trained, evaluated, and the best model selected.	• Flask web application developed, tested, and deployed successfully.

SMARTBRIDGE
Let's Bridge the Gap

SKILL WALLET
A SmartBridge Product

Customer Thought *What is the customer thinking?*	• •I need an accurate system to predict flood risk. • The application should be easy to use. • I hope it uses reliable weather data.	• The prediction should be accurate. • I expect quick and reliable results. • The system should help me make informed decisions.	• I can use this application whenever needed. • The prediction helps me prepare for floods. • This system is useful for my safety.
Customer Feeling *What is the customer feeling?*	• Concerned about flood safety. • Curious about how the system works. • Hopeful for a reliable solution.	• Optimistic about the prediction. • Confident in the technology. • Interested in the results.	• Relieved after receiving the prediction. • Satisfied with the application. • Safe and prepared for potential flood risks.
Process Ownership *Who is in the lead on this?*	• Data Engineering Lead Team. • Cloud Infrastructure Operations Unit.	• AI Development Engineering Lead. • Core Analytics Science Team. • System Performance Evaluation Specialist.	• Emergency Management Operations Director. • Public Safety Dispatch Coordinator. • Local Field Response Logistics Team.
Opportunitie s *How can we improve this*	• Implement automated validation to filter noise. • Set up immediate alert flags for down sensors. • Optimize backend parsing for faster intake.	• Train models on extreme regional weather anomalies. • Enable parallel processing to save runtime minutes. • Standardize data input formats for smooth scaling.	• Deploy automated fallback SMS systems immediately. • Integrate precise geo-fencing for target zone alerts. •Create quick dashboard buttons for direct relays.
