Project Name	Rising Waters
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	No
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	No
8	Dockerfile / Containerization config (if applicable)	No

9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Project Structure • Dataset - flood_dataset.csv • Flask - templates - index.html - analytics.html -contact.html - app.py - requirements.txt • Training - Data_Preprocessing.ipynb - RandomForest_Model.ipynb - DecisionTree_Model.ipynb - KNN_Model.ipynb - XGBoost_Model.ipynb - flood_model.pkl • README.md

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Swathi7892.pythonanywhere.com

Login Credentials (Demo)	Not Required
Platform / Hosting Provider	PythonAnywhere
Repository Link	https://github.com/mamidalaswathi2006-alt/Rising_Waters_Project
Demo Video Link	https://photos.app.goo.gl/45sHoZUAVfiTsxvJ6

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1.Pre-requisites:

- Python: Version 3.10 or above
- Anaconda Navigator (optional, for Jupyter Notebook)
- Jupyter Notebook for data analysis and model development
- Flask

Python Libraries:

- Pandas
- NumPy
- Matplotlib
- SeabornScikit-learn
- XGBoost
- Pickle

Step 1

Clone the repository

git clone https://github.com/mamidalaswathi2006-alt/Rising_Waters_Project

Step 2

Move into the project folder

```
cd FLOOD_PREDICTION_SYSTEM
```

Step 3

Install dependencies `pip install -r`

`requirements.txt`

Step 4

Run the Flask application `python`

`app.py`

Step 5

Open your browser and visit <http://127.0.0.1:5000>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality and completeness of historical rainfall and weather data.	Use updated, clean, and larger datasets. Future versions can integrate real-time weather APIs.

2	The system does not provide live flood monitoring or real-time alerts	Currently uses historical data for prediction. Real-time monitoring can be added in future updates.
3	The model may not perform well for regions outside the training dataset.	Retrain the model with region-specific data to improve prediction accuracy.
