

Brainstorming & Idea Prioritizing

Date	30 June 2026
Team ID	xxxxxxx
Project Name	Rising Waters
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Swathi Sai Uma Lakshmi Mamidala	Develop a machine learning-based web application to predict flood risk using historical weather and rainfall data.	Machine Learning / Artificial Intelligence	1
2	Gorijala Harika Gayathri	Launching a network of battery-powered acoustic sensors near urban canals that trace real-time water flow sounds and trigger automated voice alerts via local speakers when blocks happen.	IoT Infrastructure	2
3	Gandham Ramcharan	Developing an offline geospatial hazard mapping software that allows disaster response teams to manually log blocked city drains on a digital layout during heavy rains.	Web Applications	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move

forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Machine Learning Based Flood prediction system	High (Completely software-driven, quick to build with open-source libraries, and requires no expensive infrastructure costs)	High (Flood Prediction helps in early warning disaster preparedness, property damage, protecting human lives by identifying potential flood risk in advance.)	1	Yes
2	Acoustic IoT Sensor Alert System	Medium (Requires physical hardware component sourcing, battery maintenance, and suffers from outdoor noise errors)	High (Excellent for live alerting but out of scope for a pure software and AI training track)	2	No
3	Manual Geospatial Hazard Mapping Utility	High (Simple frontend interface logic)	Medium (Relies entirely on manual human data entry during an ongoing storm, which is highly impractical)	3	No
